ClearView®
Uterine Manipulator

ClearView®
TOTAL Laparoscopic Hysterectomy

Optimal visualization | Complete uterine control.

www.blueendo.com
ClearView is an innovative, completely disposable, uterine manipulator. It provides surgeons with optimal visibility and complete uterine control during laparoscopic procedures. With its pivot point at the cervical os, ClearView provides 120° anteversion, 90° retroversion, as well as lateral movement; for the greatest motion range of any uterine manipulator. No tenaculum is required for insertion; and with the patient in the preferred supine position; ClearView’s light-weight, balanced design is self-holding, eliminating the need for an assistant.

Greatest Range of Motion:
- 120° anteversion
- 90° retroversion

Additional Benefits

Dye Injection Port
The easy to use dye injection port allows for effective chromotubation when necessary.

Self-holding Device
The light-weight, balanced design is easily placed and left alone. Freeing the hands of the surgeon and eliminating the need for an assistant.

Complete ClearView Kit

- Elastomeric Tip
- Balloon
- Pivot at the Cervical os
- 1cm Spacer
- Dye Injection Port
- Balloon Inflation Valve
- Disposable Sound Dilator
- Rotating Control Handle
- 12 ml Syringe

ClearView TOTAL is a single-use, sterile device that allows for uterine manipulation and clearly defines where to make the colpotomy incision. In addition to the features of the traditional ClearView, the ClearView TOTAL includes a pre-attached occluder balloon as well as 3 different sizes of colpotomy cups, conveniently packaged in a sterile inner tray which can be removed and placed aside until use. The colpotomy cups were designed for improved visibility during insertion and are colored for easy identification when making the colpotomy incision.

ClearView TOTAL is designed specifically for laparoscopic procedures where it is desirable to locate the position of the vaginal fornices; typically during Total Laparoscopic Hysterectomies.

### Additional Benefits

#### Colpotomy Cup
Each ClearView TOTAL includes 3 different sizes (3, 3.5, 4cm) of colpotomy cups to ensure the proper size is available. The cups, which are made from a proprietary material, can be used with both electrosurgical and harmonic scalpels.

#### Occluder Balloon
The pre-attached occluder balloon requires no assembly. It serves as a seal, preventing the loss of the pneumoperitoneum once the colpotomy incision has been made.

**Tips:**
- **Colpotomy Cup:** 3 sizes available: 3cm, 3.5cm, 4cm
- **Occluder Balloon:** Requires no assembly
- **12 ml Syringe:** Used for filling the occluder balloon
- **1 cm Spacer:** Included in the kit

**Not pictured but included in kit:** 60mL syringe to fill occluder balloon and disposable sound probe.
Clearview® Total Benefits

• Clearview® Total Benefits

Colopotomy Cup

Each ClearView TOTAL includes 3 different sizes (3, 3.5, 4 cm) of colpotomy cups to ensure the proper size is available. The colpotomy cups are made from a proprietary material which, unlike most other colpotomy cups, can be used with both electrosurgical and harmonic scalpels. The colpotomy cups were designed for improved visibility during insertion and are colored for easy identification when making the colpotomy incision.

Occluder Balloon

The pre-attached occluder balloon serves as a seal, preventing the loss of the pneumoperitoneum once the colpotomy incision has been made. It is filled with 60-120 ml of sterile liquid using the included 60 ml syringe.

Pivot at the cervical os & the greatest range of motion

Pivoting at the fulcrum of the pelvic ligaments increases mobility and visibility. ClearView and ClearView TOTAL provide a full 210° of articulation for unmatched exposure.

Rotating control handle

The rotating control handle facilitates one-handed control, enabling the surgeon to manipulate the uterus through the drape without breaking the sterile barrier. The reference “bump” on the handle helps the surgeon know which direction the tip is positioned. The design also enables the patient to remain in the supine position.

Little or no assembly required

ClearView is a simple device; no assembly is required. If the spacer is needed to optimize sizing it simply snaps on in seconds. With the ClearView TOTAL, the only assembly required is snapping on the colpotomy cup once the proper size is determined. Both device’s simplicity allows them to be completely disposable; no need to worry about lost and damaged parts, reprocessing, or sterilization.
